

ALLTASK®
Serious about Service since 1992

Scaffolding and Insulation Contractors

GRAIN LNG

Our Range of Solutions

The Grain LNG Terminal is Europe's largest, supplying 20% of the UK's gas requirements. Two major safety milestones were celebrated during its construction, each with one million man-hours worked without any lost injury time.

National Grid Grain LNG aims to be the foremost LNG importation terminal in the world. Our long-term presence has contributed to unparalleled safety, reliability, and efficiency. Alltask were successful for two five-year frameworks, regularly achieving maximum KPIs on planned and reactive works.

Alltask were responsible for scaffolding and insulating new lines and tanks, each new tank being 50m high and 92 metres in diameter.

Our on-site thermal insulation engineers worked on thermal and cryogenic lines on this heavily restricted site where there is an ever-present risk of fire or explosions from gas.

As a major UK insulation contractor, Alltask can provide a wide range of insulation services for projects of all shapes and sizes.

Alltask insulation can specify, design and install thermal, cryogenic and acoustic insulation solutions that will minimise your costs, increase process efficiency and provide personnel protection while reducing CO2 emissions.

When it comes to UK insulation companies, we have a proven track record within our industry and can insulate

anything, from the smallest pipe to the most significant structures, whether thermal insulation, cryogenic or acoustic insulation is required.

Our range of solutions covers a variety of insulation services, including protecting pipework and fittings, ductwork, boilers, vessels, and tanks in various high and low-temperature applications.
