CITB TRAINING COLLEGE

Expansion of training facilitiles

The Construction Industry Training Board (CITB) plays a pivotal role in supporting the skills development of the UK construction sector. As the largest construction training college in Europe, the CITB National Construction College (NCC) trains over 30,000 workers annually across England, Scotland, and Wales.

To accommodate growing demand and expand its practical training capacity, CITB commissioned the development of a new, purpose-built training centre at its Erith campus. The project required a solution that was innovative, cost-effective, and could be delivered within a tight timeframe.

Alltask carried out the full design and build of the practical training centre, including all structural and environmental elements. The solution had to be rapidly deployed without the use of heavy lifting equipment due to site limitations and operational continuity requirements.

The new practical training facility at Erith serves as a flagship space within CITB's broader training estate. Alltask's ability to deliver a tailored, structure within an extremely short timescale enabled CITB to rapidly expand its capacity while maintaining high safety and construction standards.

The entire structure was designed, delivered, and installed in just three weeks without the use of cranes, minimising disruption to campus operations.

Alltask engineered a bespoke scaffold system using over 500 metres of HAKI 750mm beams, secured with 100 fixed anchors and 30 steel cables for long-term stability. The structure was fully wrapped in 3,600m² of HAKI cladding for weather protection and thermal efficiency, and included a custom-designed water management system to ensure year-round usability.

The new practical training facility at Erith serves as a flagship space. Alltask's ability to deliver a tailored, structure within an extremely short timescale enabled CITB to rapidly expand its capacity while maintaining high safety and construction standards.
