

ALLTASK®
Serious about Service since 1992

Your Partner for Temporary Works and Safe Infrastructure Delivery

20-YEAR PARTNERSHIP WITH J. MURPHY & SONS

Proud to Partner with Murphy's

For over two decades, Alltask has been a trusted partner to J. Murphy & Sons, delivering scaffolding, access, insulation, and temporary works across a wide spectrum of major UK infrastructure and energy projects.

Our Collaboration
We have delivered solutions on flagship projects such as Crossrail, the London 2012 Olympics, and the Grain LNG facility, plus numerous bridge, station, and utilities packages for Murphy's. Our work has consistently supported Murphy's to meet tight programmes, maintain high standards, and manage complexity without compromise.

Project Highlights
Crossrail & Stations: From Liverpool Street to Langley lift shafts, Kings Cross Square, we provided scaffold design, crash decks, hoists, and suspended solutions to support station fit outs and structural works.

London 2012 Olympics: Construction of encapsulated access scaffolds and temporary works on critical bridges and utilities in high-profile, fast-track environments.

Grain LNG (Isle of Grain): Provision of extensive scaffolding packages staged across live energy infrastructure. A high value and technically demanding scope that underlines the depth of trust Murphy's place in us.

Other works: Temporary pedestrian footbridges (Taplow), suspended protection scaffolds (Camden Road Bridge), propping and encapsulation (Fenchurch Street), pipework support (Maple Lodge WTW), and scaffold packages at Cambridge South Station, among others.

What the Works Involved
We manage the end-to-end process: in-house design, supply, installation, inspection, and coordination of scaffold and access systems. Our scope typically encompasses crash decks, birdcage access, hoists, encapsulation, protection scaffolds, propping, and insulation support. On each job, we focuse on safely enabling follow-on trades, meeting deadlines, and adapting to the evolving site demands.

Our partnership with Murphy's is built on a foundation of shared values: commitment to safety, engineering excellence, and reliable delivery. We deliver tailored solutions, consistent quality, and we align to Murphy's project ambitions.
